

ANALYSIS – Based on Psychological Battery

Name: Pati Gowri Karthikeya

Roll No: SE24UARI185

Psychological Battery Analysis – Interview 1

Participant Information

Age: 17

Name: Sunitha

Interview Topic: Emotional well-being, loneliness, stress, and social media impact

1. Loneliness Assessment

The participant reported feeling lonely mainly when they are alone, have no one to talk to, or feel left out in social situations.

Interpretation:

This indicates **situational and social loneliness** rather than constant emotional isolation. The participant's loneliness is triggered by lack of interaction and social disconnection.

2. Stress and Emotional Pressure

The participant identified the following sources of stress:

- Academic pressure
- Future-related overthinking
- Expectations and deadlines

Interpretation:

This reflects **academic stress combined with future anxiety**. The participant may experience pressure related to performance and uncertainty about future outcomes.

3. Social Support System

The participant mentioned sharing problems with close friends and family members.

Interpretation:

This suggests a **healthy support system** and comfort in seeking help, which acts as a protective factor for emotional well-being.

4. Social Media Impact

The participant reported comparing themselves to others on social media, which sometimes makes them feel behind.

Interpretation:

This indicates **social comparison behavior**, which may negatively affect self-esteem and create feelings of inadequacy.

5. Coping Mechanisms

When feeling sad or overwhelmed, the participant:

- Listens to music
- Watches movies
- Takes rest or goes for a walk

Interpretation:

These are **distraction-based and relaxation coping strategies**, which help reduce stress temporarily.

6. Help-Seeking Behaviour

The participant believes in talking to someone when feeling low.

Interpretation:

This shows **positive help-seeking behavior** and emotional awareness.

Overall Psychological Summary – Interview 1

The participant shows:

- Situational loneliness

- Academic and future-related stress
- Strong social support
- Social media comparison effects
- Uses distraction-based coping strategies
- Healthy communication habits

Conclusion:

The participant appears **emotionally stable with moderate stress**, supported by a good social network and healthy coping methods.

Psychological Battery Analysis – Interview 2

Participant Information

Age: 17

Name: Sahithi

Interview Topic: Emotional well-being, loneliness, stress, and social media impact

1. Loneliness Assessment

The participant reported feeling lonely mainly at night, during overthinking, and when they feel misunderstood.

Interpretation:

This suggests **emotional loneliness**, where the participant feels internally disconnected despite possible social presence.

2. Stress and Emotional Pressure

The participant reported stress due to:

- Deadlines and academic pressure
- Feeling not good enough compared to others

Interpretation:

This indicates **self-comparison stress and performance pressure**, which may impact confidence and self-esteem.

3. Emotional Expression

The participant usually keeps problems to themselves and only occasionally talks to a close friend.

Interpretation:

This reflects **limited emotional expression and internalization of stress**, which may increase emotional burden.

4. Social Media Impact

The participant acknowledged that social media leads to comparison and feeling behind.

Interpretation:

This shows **awareness of social comparison**, but continued emotional impact, leading to self-doubt.

5. Coping Mechanisms

When feeling overwhelmed, the participant:

- Listens to music
- Distracts themselves (scrolling, breaks)

Interpretation:

These are **avoidance and distraction coping strategies**, providing temporary relief but not addressing root causes.

6. Social Support System

The participant stated that support exists but is not always utilized.

Interpretation:

This indicates **available support but low help-seeking behavior**, suggesting hesitation in opening up.

Overall Psychological Summary – Interview 2

The participant shows:

- Emotional loneliness
- Self-doubt and comparison
- Emotional suppression
- Distraction-based coping
- Low help-seeking behavior
- Awareness but limited expression

Conclusion:

The participant appears **emotionally introspective but vulnerable**, with internalized stress and limited communication despite having support.

Psychological Battery Analysis – Interview 3**Participant Information**

Age: 16

Name: Sri Vallika Devi

Interview Topic: Emotional well-being, loneliness, stress, and social media impact

1. Loneliness Assessment

The participant reported feeling lonely during stressful days and when they have no one to talk to.

Interpretation:

This indicates **situational loneliness linked to stress and temporary disconnection**, rather than chronic loneliness.

2. Stress and Emotional Low Feelings

The participant reported stress due to:

- Failures or things not going as planned
- Overthinking

Interpretation:

This reflects **situational stress and negative thinking patterns**, especially in response to setbacks.

3. Sharing Problems

The participant is comfortable sharing problems with parents or close friends.

Interpretation:

This indicates **healthy emotional communication and strong interpersonal trust**.

4. Social Media Impact

The participant stated that social media has a minor impact but sometimes leads to comparison.

Interpretation:

This shows **moderate awareness and control over social comparison**, reducing its negative effects.

5. Coping Mechanisms

When feeling low, the participant:

- Exercises or stays active
- Watches light or entertaining content

Interpretation:

These are **healthy and active coping strategies**, which are effective in improving mood.

6. Support System

The participant feels supported by friends and family.

Interpretation:

This indicates a **strong emotional support system**, which helps maintain stability.

Overall Psychological Summary – Interview 3

The participant shows:

- Situational loneliness
- Stress due to setbacks and overthinking
- Strong support system
- Healthy coping strategies
- Good emotional expression
- Controlled social media influence

Conclusion:

The participant appears **emotionally balanced and resilient**, with effective coping skills and strong support contributing to overall well-being.
