

MindBloom — From 1,470 Ideas to 8 Features

Design Thinking · Prototype Squad · 2025–26

This document traces each MindBloom feature back to the ideas it was built from — identifying both the direct high-scoring ideas that inspired it and the indirect thematic patterns across the 1,470-idea brainwriting session that validated the need for it.

■ Home — Daily Mood Check-in

Source problems: Problem 1: School & Academic Pressure · Problem 9: Quick Relief for Anxiety & Low Moods

DIRECT IDEAS

Idea	Description	Score	Timeline
Idea #67	A 'mood-check-in' at the start of each lesson — teachers adjust pace based on responses.	3.0 High	Short
Idea #10	AI that builds a personalised 'exam warm-up' playlist the night before each test.	3.0 High	Short

INDIRECT PATTERN

Multiple ideas across Problems 8 and 9 converged on the insight that small daily self-awareness rituals — tracking energy, logging mood, naming feelings — had the highest composite desirability scores. The Home check-in synthesises this pattern into a single 30-second daily entry point.

■ Music — Mood-Matched Audio

Source problems: Problem 9: Quick Relief for Anxiety & Low Moods · Problem 1: School & Academic Pressure

DIRECT IDEAS

Idea	Description	Score	Timeline
Idea #10	AI that builds a personalised 'exam warm-up' playlist the night before each test.	3.0 High	Short
Idea #40	Soft instrumental music played in common areas between 7–9 AM to ease morning arrival.	3.0 High	Short

INDIRECT PATTERN

Audio-as-emotional-regulation appeared in 6 of 10 problem sheets with consistent High desirability scores. The pattern showed teens want low-effort emotional tools — music requiring no social interaction was the most universally endorsed format.

■ Rescue — Immediate Safe Space

Source problems: Problem 9: Quick Relief for Anxiety & Low Moods · Problem 8: Self-Doubt & Low Self-Worth

DIRECT IDEAS

Idea	Description	Score	Timeline
Idea #9	A classroom panic-button that silently alerts a counsellor via their smartwatch.	2.33 Med	Mid
Idea #2	A browser plugin that blocks exam-panic websites and redirects to a breathing exercise.	3.0 High	Short

INDIRECT PATTERN

Problem 9 produced the highest density of Short-term, High-priority ideas of any sheet — 126 out of 147 scored High. The overriding theme was immediacy: teenagers want help that requires zero friction in a crisis moment. Rescue distills this into a single-tap entry point.

■ Wall — Positive, Non-Competitive Feed

Source problems: Problem 2: Social Media & Digital Identity · Problem 10: Openness & Vulnerability in Friendships

DIRECT IDEAS

Idea	Description	Score	Timeline
P2 theme	Multiple ideas proposing anonymous, non-comparative sharing spaces scored 3.0 composite.	3.0 High	Short
P10 theme	Ideas around vulnerability-safe expression platforms — all 147 ideas High Priority.	3.0 High	Short

INDIRECT PATTERN

Problem 2 was the second-highest scoring sheet (121/147 High Priority). The dominant insight: teens want to share but not perform. Every idea that removed comparison mechanics scored Higher than those that kept them. Wall implements this directly — no likes, no follower counts.

■■ Gallery — Creative Expression Space

Source problems: Problem 2: Social Media & Digital Identity · Problem 8: Self-Doubt & Low Self-Worth

DIRECT IDEAS

Idea	Description	Score	Timeline
P2 indirect	Ideas around creative self-expression as identity-building (not performance) scored consistently High.	3.0 High	Short
P8 indirect	Art and creative output appeared repeatedly as a self-worth rebuilding mechanism across Problem 8.	3.0 High	Mid

INDIRECT PATTERN

Gallery is the most indirectly derived feature. No single idea maps directly to it, but across Problems 2, 7, and 8 a consistent theme emerged: visual creative expression was endorsed as both a social-connection mechanism and a self-esteem tool. Gallery gives this a dedicated space.

■ Library — Curated Resources

Source problems: Problem 1: School & Academic Pressure · Problem 8: Self-Doubt · Problem 3: Rebuilding Trust

DIRECT IDEAS

Idea	Description	Score	Timeline
Idea #48	A student-run podcast where teens share honest stories about academic pressure.	3.0 High	Mid
Idea #51	A peer tutoring exchange app: trade skills, no money, just mutual support.	3.0 High	Mid

INDIRECT PATTERN

Across all 10 problem sheets, knowledge-access ideas — guides, resources, expert content — appeared as a consistent secondary solution. The library consolidates these: rather than building separate tools for each topic, one curated space covers mental health, relationships, and life skills.

■ Journal — Private Daily Reflection

Source problems: Problem 8: Self-Doubt & Low Self-Worth · Problem 4: Parent-Teen Communication

DIRECT IDEAS

Idea	Description	Score	Timeline
P4 theme	All 147 ideas in Problem 4 scored High Priority — the dominant theme was private processing before communication.	3.0 High	Short
P8 theme	Self-monitoring and reflection tools consistently scored High/High/High across Problem 8.	3.0 High	Short

INDIRECT PATTERN

Problem 4 is notable — it is one of only two sheets where every single idea scored High Priority (147/147). The theme was processing emotions privately before expressing them. Journal directly implements this: a safe private space that builds self-awareness without requiring social interaction.

■ Rooms — Anonymous Peer Circles

Source problems: Problem 6: Teen Loneliness & Belonging · Problem 10: Openness & Vulnerability in Friendships

DIRECT IDEAS

Idea	Description	Score	Timeline
P6 theme	Problem 6 (Loneliness & Belonging) scored 126/147 High Priority — peer matching by shared feeling was the dominant concept.	3.0 High	Short
P10 theme	Problem 10 scored 147/147 High Priority — every idea around vulnerability-safe group spaces was endorsed.	3.0 High	Short

INDIRECT PATTERN

Rooms is the most directly supported feature in the dataset. Two entire problem sheets (6 and 10) converge on the same insight: teenagers are not lonely because they lack people — they are lonely because they lack safe contexts to be honest. Anonymous matching by feeling, not demographics, was the top-scoring concept across both sheets.

Note: All composite scores are averaged across Viability, Feasibility, and Desirability (each 1–3). A score of 3.0 = High/High/High. Problem sheet idea counts: 147 ideas per problem × 10 problems = 1,470 total. This analysis was prepared by Prototype Squad as part of their Design Thinking portfolio.
