

PSYCHOLOGICAL BATTERY ANALYSIS COMPARATIVE INTERVIEW ASSESSMENT SUMMARY — CASE 01

Participant Name: Vydik **Age:** 16

Interview Topic: Emotional Well-being, Loneliness, Stress, and Social Support

1. LONELINESS ASSESSMENT

The participant reported experiencing loneliness when spending long periods alone and when friends or family members are unavailable.

Interpretation: This indicates situational loneliness primarily associated with reduced social interaction and the absence of meaningful companionship.

2. STRESS AND EMOTIONAL PRESSURE

The participant did not identify major stressors but indicated that being isolated, bored, or lacking communication contributes to negative emotions.

Interpretation: The participant's emotional discomfort appears to be linked more to social disconnection than to academic or performance-related pressures.

3. SOCIAL SUPPORT SYSTEM

The participant reported sharing problems with close friends and family members and occasionally attempting to solve problems independently.

Interpretation: This reflects the presence of a reliable support network and balanced problem-solving behavior.

4. SOCIAL MEDIA IMPACT

No significant impact of social media was reported during the interview.

Interpretation: The participant does not currently appear to experience notable emotional effects related to social media use.

5. COPING MECHANISMS

Listening to music, watching relaxing content, talking to friends, and going for walks.

Interpretation: These coping strategies promote emotional regulation and stress reduction through relaxation and social connection.

6. HELP-SEEKING BEHAVIOUR

The participant expressed comfort in discussing personal problems with trusted individuals.

Interpretation: This demonstrates healthy help-seeking behavior and emotional openness.

CONCLUSION

The participant appears socially connected and emotionally resilient.

PSYCHOLOGICAL BATTERY ANALYSIS COMPARATIVE INTERVIEW ASSESSMENT SUMMARY — CASE 02

Participant Name: Hasini **Age:** 16

Interview Topic: Emotional Well-being, Loneliness, Stress, Social Media, and Support Systems

1. LONELINESS ASSESSMENT

The participant reported feeling lonely when spending extended periods alone and when there is no one available to talk to.

Interpretation: This suggests situational loneliness associated with limited social interaction and emotional connection.

2. STRESS AND EMOTIONAL PRESSURE

The participant identified examinations, deadlines, and excessive workload as major sources of stress.

Interpretation: These responses indicate academic stress resulting from performance expectations and time-management demands.

3. SOCIAL SUPPORT SYSTEM

The participant regularly seeks support from friends and family members during difficult situations.

Interpretation: This reflects the presence of a strong and dependable emotional support system.

4. SOCIAL MEDIA IMPACT

The participant acknowledged that social media occasionally affects self-perception but actively avoids comparing herself with others.

Interpretation: This demonstrates awareness of social comparison and the ability to regulate its influence on self-esteem.

5. COPING MECHANISMS

Listening to music, talking to trusted individuals, and seeking emotional support.

Interpretation: These coping methods promote emotional stability and effective stress management.

6. HELP-SEEKING BEHAVIOUR

The participant strongly believes in sharing problems with trusted people rather than suppressing emotions.

Interpretation: This demonstrates positive emotional awareness and proactive help-seeking behavior.

CONCLUSION

The participant appears emotionally mature and self-aware.

PSYCHOLOGICAL BATTERY ANALYSIS COMPARATIVE INTERVIEW ASSESSMENT SUMMARY — CASE 03

Participant Name: Sumana **Age:** 16

Interview Topic: Emotional Well-being, Loneliness, Stress, and Social Support

1. LONELINESS ASSESSMENT

The participant reported rarely experiencing loneliness and expressed enjoyment of spending time alone.

Interpretation: This suggests a high level of comfort with solitude and emotional independence.

2. STRESS AND EMOTIONAL PRESSURE

The participant identified academic demands and negative interpersonal interactions as primary sources of stress.

Interpretation: These responses indicate stress associated with academic expectations and social experiences.

3. SOCIAL SUPPORT SYSTEM

The participant primarily seeks support from her father when experiencing emotional difficulties.

Interpretation: This reflects the presence of a trusted and reliable family-based support system.

4. SOCIAL MEDIA IMPACT

The participant reported that social media does not significantly affect her emotions or self-perception.

Interpretation: The participant appears resilient to social comparison influences commonly associated with social media use.

5. COPING MECHANISMS

Talking openly with her father, expressing emotions, and reflecting on her feelings.

Interpretation: These coping strategies encourage healthy emotional processing and stress reduction.

6. HELP-SEEKING BEHAVIOUR

The participant willingly communicates emotions with trusted family members when needed.

Interpretation: This demonstrates positive emotional expression and healthy support-seeking behavior.

CONCLUSION

The participant appears emotionally stable, independent, and resilient.
