COMPARATIVE INTERVIEW ASSESSMENT SUMMARY — CASE 01

Participant Name: Ananya Sharma

Age: 16

Interview Topic: Emotional Well-being, Loneliness, Stress, and Social Media Impact

1. LONELINESS ASSESSMENT

The participant reported feeling lonely when studying while peers were socializing and enjoying themselves.

Interpretation: This indicates situational loneliness resulting from feelings of exclusion and social disconnection. The participant's loneliness appears to be linked more to perceived social isolation rather than physical isolation.

2. STRESS AND EMOTIONAL PRESSURE

The participant identified the following major stressors:

- Academic pressure and examination schedules
- Personal conflicts with close friends or loved ones
- Fear of being left out socially (FOMO)

Interpretation: These responses suggest a combination of academic stress and interpersonal stress, both of which contribute to emotional discomfort and feelings of loneliness.

3. SOCIAL SUPPORT SYSTEM

The participant reported seeking support primarily from family members and a close friend during difficult situations.

Interpretation: This indicates the presence of a strong and dependable support system, which serves as a protective factor against prolonged emotional distress.

4. SOCIAL MEDIA IMPACT

The participant stated that social media, particularly online content featuring ideal appearances and lifestyles, affects how they perceive themselves.

Interpretation: This reflects social comparison behavior, which may occasionally contribute to reduced self-confidence and dissatisfaction with personal achievements or appearance.

5. COPING MECHANISMS

When feeling overwhelmed, the participant utilizes the following methods:

- Sleep and physical rest
- Eating favorite foods
- Listening to music
- Taking explicit time to relax

Interpretation: These are primarily emotion-focused coping strategies that help reduce stress and improve mood in the short term.

6. HELP-SEEKING BEHAVIOUR

The participant is willing to discuss problems when emotions become difficult to manage.

Interpretation: This demonstrates healthy help-seeking behavior and awareness of the importance of emotional expression.

OVERALL PSYCHOLOGICAL SUMMARY

- Situational loneliness coupled with peer-exclusion triggers.
- Academic and interpersonal stress vectors.
- Strong family-centric foundational support.
- Social comparison tendencies via curated digital content.
- Relaxation-based and emotion-focused coping mechanisms.
- Positive and proactive help-seeking behavior.

CONCLUSION

The participant appears emotionally resilient despite experiencing occasional loneliness and stress. Family support and healthy coping mechanisms play an important role in maintaining emotional well-being.

PSYCHOLOGICAL BATTERY ANALYSIS

COMPARATIVE INTERVIEW ASSESSMENT SUMMARY — CASE 02

Participant Name: Sanjana Reddy

Age: 16

Interview Topic: Emotional Well-being, Loneliness, Stress, and Social Media Impact

1. LONELINESS ASSESSMENT

The participant reported feeling lonely when surrounded by people but emotionally disconnected, or when unable to share personal thoughts with others.

Interpretation: This suggests emotional loneliness, characterized by a lack of meaningful emotional connection despite the presence of social interactions.

2. STRESS AND EMOTIONAL PRESSURE

The participant identified stress resulting from:

- Balancing academic workload with daily responsibilities
- Concerns and anxiety regarding future planning and milestones
- Situations where personal efforts do not produce expected outcomes

Interpretation: This reflects performance-related stress and frustration associated with high personal expectations and future uncertainty.

3. SOCIAL SUPPORT SYSTEM

The participant prefers discussing core problems selectively with trusted friends or family members.

Interpretation: This indicates access to reliable emotional support and a clear preference for selective emotional disclosure.

4. SOCIAL MEDIA IMPACT

The participant acknowledged feeling affected by seeing the achievements and successes of peers and others online.

Interpretation: This demonstrates awareness of social comparison processes, which may occasionally influence self-esteem and perceived personal progress.

5. COPING MECHANISMS

When feeling overwhelmed, the participant engages in:

- Listening to music
- Watching humorous or lighthearted videos
- Taking long walks
- Engaging in meaningful or goal-oriented hobbies

Interpretation: *These coping strategies promote active emotional regulation and help reduce stress through positive distraction and self-care.*

6. HELP-SEEKING BEHAVIOUR

The participant believes in actively reaching out to trusted individuals during difficult times.

Interpretation: *This demonstrates positive help-seeking behavior and recognition of the critical importance of social support systems.*

OVERALL PSYCHOLOGICAL SUMMARY

- Emotional loneliness characterized by internal disconnection.
- Future-oriented and performance-related stress.
- Selective emotional expression and deliberate boundary setting.
- Social comparison tendencies regarding peer achievements.
- Healthy, distraction-based and self-care coping strategies.
- Positive help-seeking behavior with trusted inner circle.

CONCLUSION

The participant appears emotionally aware and deeply reflective. Although social comparison and future-related concerns occasionally affect well-being, strong support systems and healthy coping methods contribute positively to emotional health.

PSYCHOLOGICAL BATTERY ANALYSIS

COMPARATIVE INTERVIEW ASSESSMENT SUMMARY — CASE 03

Participant Name: Priya Verma

Age: 16

Interview Topic: Emotional Well-being, Loneliness, Stress, and Social Media Impact

1. LONELINESS ASSESSMENT

The participant reported feeling lonely when spending long, uninterrupted periods alone.

Interpretation: This indicates situational loneliness, primarily associated with reduced immediate social interaction and companionship.

2. STRESS AND EMOTIONAL PRESSURE

The participant identified the following primary stressors:

- Excessive academic and environment pressure
- Cognitive overthinking and rumination cycles
- Situations that do not pan out as structurally expected

Interpretation: These responses suggest emotional stress resulting heavily from internal expectations and cognitive rumination.

3. SOCIAL SUPPORT SYSTEM

The participant reported sharing problems openly with close friends and trusted individuals.

Interpretation: This reflects the presence of highly supportive interpersonal relationships and a clear willingness to seek assistance when needed.

4. SOCIAL MEDIA IMPACT

The participant acknowledged that social media platforms sometimes lead to direct comparison with others and feelings of inadequacy.

Interpretation: This suggests occasional negative effects of social comparison on emotional well-being, self-worth, and self-esteem.

5. COPING MECHANISMS

When feeling overwhelmed, the participant utilizes:

- Listening to soothing music
- Taking designated rest and screen breaks
- Talking through emotions with trusted individuals

Interpretation: *These coping strategies provide timely emotional relief and encourage healthy, conversational emotional processing.*

6. HELP-SEEKING BEHAVIOUR

The participant strongly encourages discussing problems with trusted individuals rather than remaining isolated.

Interpretation: *This demonstrates healthy emotional awareness and positive proactive attitudes toward seeking professional or interpersonal support.*

OVERALL PSYCHOLOGICAL SUMMARY

- Situational loneliness tied to physical duration of isolation.
- Overthinking and internal expectation tendencies.
- Academic and personal expectation stress elements.
- Strong, collaborative and open support networks.
- Healthy communication-based and rest-based coping mechanisms.
- Positive and advocacy-level help-seeking behavior.

CONCLUSION

The participant appears emotionally balanced and socially connected. Although loneliness and overthinking occasionally affect emotional well-being, supportive relationships and adaptive coping strategies help maintain psychological resilience.
